

Presidio Trust Infrastructure Long Range Implementation Strategy 2020-2022

San Timoteo provided the Presidio Trust with strategic support for the development of long-range capital investment planning tools to address infrastructure replacement, improvement, and sustainability enhancements over a 20-year time frame.

Specifically, the work included:

- Delivering workshops on long-range infrastructure planning to Trust engineering, operations, and planning staff
- Developing a risk management-based project ranking system
- Developing concept level project scopes for integrating sustainability initiatives with deferred maintenance
- Overseeing concept level cost estimating

This program will play a key role in sustaining the operations of this popular national park for years into the future.
